MValve Recommendation Statement

To whom it may Concern,

Based on the innovative, smart and ingenious concept of the silicon one-way air valve in the center of a transparent PVC pipe, DC Pro Engineering welcomes this serious challenge to a status quo old concept that lasted around a century creating many operational issues.

Hence DC PRO Engineering recommends the installation and use of MValve for new as well as existing chilled Fan Coil Units (FCUs) and indoor DX units replacing the old and outdated U-Trap concept.

MValve can easily be installed in existing and for new installations offering many operation and usage advantages. To name a few:

- ✓ Full transparent material allowing visual verification at all times
- ✓ No mechanical parts
- ✓ Easy installation and replacement
- ✓ Virtually maintenance free
- ✓ Lower service cost
- ✓ False ceiling height reduction
- ✓ Better Indoor Air Quality (IAQ)

DC Pro Engineering highly recommends retrofitting existing FCUs with MValve. acyer is my
